TECHNICAL SKILLS

Programming Languages: SQL, Python, R (dplyr, tidyr, stringr, DBI), Shell scripting
Data Platforms & Tools: Google BigQuery, Dataform (ELT modelling / dbt-equivalent), MySQL, Google Cloud Storage, Metabase
Infrastructure & DevOps: Docker, Jenkins (CI/CD), Git, DBeaver, Neovim, RStudio
Documentation & Collaboration: Markdown, Roxygen, LaTeX, Slack, Microsoft Office
Languages: Cantonese (Native), Mandarin (Native), English (Full professional proficiency)

WORK EXPERIENCE

Junior Data Manager

May 2024 – Present

Zapmap

Bristol, UK

- **Designed and maintained production ELT pipelines** using Dataform on Google BigQuery, migrating legacy ETL processes to a scalable cloud-native architecture with documented source-to-target mappings — an approach directly analogous to dbt-based modelling.
- **Engineered and owned SQL pipelines at scale** in Google BigQuery to process 44,300+ EV charging locations, delivering monthly data exports to Google Cloud Storage for the UK Department for Transport's official infrastructure statistics.
- **Standardised and validated data ingestion** across heterogeneous CPO partner sources using OCPI integration pipelines, building repeatable quality checks to ensure schema consistency and data reliability at the point of ingestion.
- **Built an internal automation framework** to consolidate recurring data transformation and validation workflows, reducing manual processing overhead and enabling team scalability — with reusable, documented functions modelled on software engineering best practices.

Data Assistant

March 2023 – May 2024

Zapmap

Bristol, UK

- **Validated and processed incoming data feeds** from charging network partners, performing systematic quality checks on charge point metadata and resolving inconsistencies in production MySQL databases.
- **Collaborated with senior engineers** on database schema changes and ad-hoc data transformations, gaining hands-on experience with production data systems and contributing to schema design discussions.

Data Science Team Leader

February 2023 – April 2023

180 Degree Consulting

Bristol, UK

- **Delivered a Python-based data pipeline** for a non-profit client, leading a team of four to automate volunteer scheduling analytics and build a real-time call management dashboard from scratch.
- **Led stakeholder requirements gathering** to translate business needs into technical specifications, managing delivery end-to-end across scoping, build, and handover.

EDUCATION

University of Bristol

Bristol, UK

Master of Science by Research, Population Health Sciences

2020-2023

- Thesis: Purchasing and consumption of over-the-counter antibiotics: a mixed-method approach to secondary data
- Supported by the University of Bristol UK-China AMR Program Scholarship.

Shandong University

Jinan, China

Bachelor of Laws, Anthropology

2016-2020

- GPA: 86.35/100

PROJECTS

Personal Portfolio Website | *Hexo, GitHub Pages, Umami (self-hosted analytics on Vercel)*

2023 – Present

- Built and maintain a multi-language static site with custom domain, CI/CD via GitHub Actions, and a self-hosted analytics stack — exercising end-to-end ownership across deployment, monitoring, and iteration.
